

EARLYSENSE MONITORING

- EarlySense Monitoring is a Proactive Patient Care that utilizes sensors to monitor vital signs, movement and respirations to recognize changes in condition prior to need for re-hospitalization. Sensors send feedback to a central monitor at the nurses' station as well as to pagers designated for nursing and CNA staff to alert caregivers to changes.
- EarlySense has introduced an innovative continuous patient monitoring solution designed to enhance patient safety and reduce risk for general care patients.
- EarlySense was founded in 2004, is a dynamic, rapidly growing company focused on next generation patient monitoring systems for hospitals, healthcare systems, integrated delivery networks and rehabilitation centers.
- Without ever touching the patient, the EarlySense System provides continuous patient monitoring for Heart Rate, Respiratory Rate and Motion, to potentially allow the clinical team to manage:
 - ✓ Early Detection of Patient Deterioration
 - ✓ Fall Prevention
 - ✓ Pressure Ulcers Prevention
